

Online training for teachers with 3-8-year-olds

We will train you step-by-step on how to master STEAM pedagogy. You will feel confident when introducing scientific thinking to 3-8-year-olds children in a classroom or remotely. This training includes a separate module how to teach STEAM remotely in an engaging way.

You will also learn to teach skill growth over fact-memorization, helping students grow into independent, critical thinkers. You will learn how to teach science process skills, to use storytelling play and drama elements.

Furthermore, we provide you with top-quality lesson materials that include video-guided experiments, engaging stories, pedagogical tips and equipment lists for lessons to do with children.

Kide Science program is already in use in schools and learning centers by many Thai teachers.
